Summary

Frontend-focused full stack engineer with experience building scalable, production-grade web applications across SaaS platforms. Strong background in React, TypeScript, GraphQL, REST APIs, reusable component systems, and high-performance user experiences. Experienced in collaborating across product, design, and engineering to deliver reliable frontend architecture, support complex workflows, and improve quality, maintainability, and scale.

Work Experience

Workhuman

Remote, Massachusetts

Software Engineer III (Full Stack)

May 2022 - Current

- Architected and rebuilt the Gratitude Bar live event platform using AppSync GraphQL, DynamoDB, and WebSocket subscriptions, supporting 5,000+ concurrent users, increasing engagement by 264%, and reducing monthly cloud costs by about 80%.
- Led development of customer-facing web experiences using Next.js, React, TypeScript, and Tailwind, building reusable frontend systems and shared UI patterns while contributing to supporting APIs and infrastructure, improving consistency, maintainability, and speed of delivery across product surfaces.
- Designed and maintained serverless backend services with AWS Lambda, AppSync, and API Gateway while leading end-to-end delivery of scalable platform features in partnership with product, design, and marketing.
- Owned deployment pipelines and cloud infrastructure across frontend and backend systems, improving release reliability and delivery through CI/CD automation.
- Monitored production systems using logs, metrics, and performance tooling to troubleshoot issues and improve reliability across customer-facing experiences.
- Mentored engineers and contributed to code review standards, testing practices, and technical planning.

Contentful Platform Tooling

September 2024 - Current

- Built internal Contentful tooling in React and TypeScript to improve structured content workflows and reduce manual operational overhead across ABM, Product Marketing, and Events teams.
- Released publicly installable apps for repeater and conditional field workflows, enabling more scalable and maintainable content modeling patterns.
- Streamlined complex structured content entry with reusable CMS tools that improved editor experience, consistency, and publishing efficiency.
- Developed an AI-powered alt text generator with Python and AWS, adopted by approximately 40 editors to improve accessibility, SEO, and workflow efficiency.

MP

Remote, Massachusetts

Frontend Engineer

August 2020 - April 2022

- Led frontend development for the company's marketing website, building responsive web experiences that supported brand, content, and campaign initiatives.
- Partnered with stakeholders to translate design direction and business requirements into maintainable implementations using PHP, JavaScript, jQuery, and SCSS.
- Established reusable components and styling patterns that improved consistency, reduced duplication, and streamlined ongoing site updates.
- Improved site responsiveness, usability, and overall quality through iterative enhancements and continuous maintenance.
- Operated independently across both design and frontend execution, contributing to end-to-end delivery from concept through launch.

Freelance

Remote, Massachusetts

Web Developer

September 2019 - Current

- Led end-to-end delivery of custom websites for clients, from early design direction and UI concepts through CMS implementation and launch.
- Partnered with clients to translate business goals and brand needs into tailored web experiences with strong usability and visual consistency.
- Built reusable frontend patterns and custom WordPress implementations that improved maintainability and streamlined future updates.
- Provided ongoing post-launch support through content updates, styling refinements, and feature enhancements aligned to client needs.

Education

MS in Software Development

Boston University

Major in Software Development, Focus: Web Application Development

- Relevant Modules Completed: Software Design and Patterns, Rich Internet Application Development, Server-Side Web Development, Information Systems Analysis and Design, Data Structures & Algorithms

BS in Graphic Design

Johnson & Wales University

Major in Graphic Design, Focus: Web Design

- Relevant Modules Completed: Web (UI/UX) Design, Print Design, Product Design, Adobe Creative Cloud, Design Solutions Team, Client Collaboration

Skills

Languages	TypeScript, JavaScript, Python, PHP
Frontend	React, Next.js, Tailwind CSS, HTML, CSS, SCSS, design systems, accessibility, SSR, SSG
CMS	Contentful, custom CMS tooling
Backend and APIs	Node.js, GraphQL, REST APIs
Cloud and Infrastructure	AWS Lambda, AppSync, API Gateway, DynamoDB, serverless architectures
Tools	GitHub, Vercel, Figma

Certification

Google UX Design Certification

Coursera

- Built foundational UX skills in user-centered design, including research, usability testing, problem definition, ideation, wireframing, prototyping, accessibility, and iterative design refinement.

Graduate Certificate in Web Application Development

Boston University

- Completed graduate coursework in full stack web application development, covering modern frontend and backend technologies including JavaScript, HTML5, CSS, Vue.js, Angular, PHP, Node.js, MySQL, and MongoDB, with focus on building user interfaces, database-backed applications, and scalable web solutions.
